Week 1 — Project Initialization & Setup

1. Week Overview

In Week 1, the main goal is to set up the working environment, install necessary tools and applications, and explore the structure of the target web application that will be tested in the coming weeks.

2. Goals

Define project goals and expected outcomes

Set up the vulnerable web application (DVWA/ Juice Shop/ bWAPP)

Install required tools for testing environment

Explore and document the structure and components of the chosen application

3. Tools and Software Requirements

XAMPP / WAMP / LAMP - Setup a local web server

Web Browser (Chrome/Firefox) - Access and interact with the application

- Install the Vulnerable Web Application

Choose one of these and install it locally:

DVWA (Damn Vulnerable Web App)

Installation Steps (Example: DVWA on XAMPP)

Install XAMPP and launch Apache and MySQL.

Download DVWA and extract to xampp/htdocs/ folder.

Open browser and go to:

http://localhost/DVWA/setup.php

Click Create / Reset Database

Login using default credentials (admin/password)

Change security level to low (for learning)
